Abraham Sanchez

Senior Software Engineer — Cross-Platform Systems, XR & Tooling

abrahamgto@gmail.com · +52 464 654 0263 · Salamanca, Gto, Mexico · github.com/AbrahamSanchezDev

Portfolio: abrahamsanchezdev.github.io/abraham_sanchez_profile · linkedin.com/in/abraham-sanchez-f

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years shipping commercial products across PC, mobile (iOS/Android), WebGL and XR. Raised player retention by 5%+ and cut crash rates by 5% on a high-traffic F2P mobile title, led an XR team whose iOS AR app was nominated for the Unity Awards, and saved $50K+ in production costs through pipeline automation. Focused on scalable, modular architecture, cloud-integrated workflows, internal tooling and AI-assisted engineering, from prototype to live operations. Open to remote roles and relocation.

saved via pipeline automation

PROFESSIONAL EXPERIENCE

Alter Learning *Senior Software Engineer – Unity & XR (Contract)* Nov 2025 – Feb 2026

- Engineered a reusable VR integration framework that cut VR porting time by 40%+ across a 20+ app ecosystem (iOS, Android, PC, macOS, Meta Quest 3).
- Refactored core systems around SOLID and modular ScriptableObjects, reducing recurring defect reports by ~35%.
- Defined development standards and documentation that cut new-developer onboarding by ~30%.
- Optimized memory and performance across mobile, desktop and standalone VR.

Scopely *Senior Software Engineer – Unity Client* Jun 2024 – Aug 2025

- Delivered a new splash screen for WWE Champions that raised player retention by 5%+ on a high-traffic F2P mobile title.
- Reduced crash rates by 5% through targeted optimization and stability fixes (Unity Profiler, Android Studio, BugSnag).
- Built internal desktop and engine tools for LiveOps and QA teams, improving cross-functional workflow efficiency.
- Optimized cloud asset-delivery pipelines with asset bundling and remote content distribution; integrated analytics hooks and data-driven UI.

Amber Studio *Senior Software Engineer – Unity (Contract)* Jan 2024 – May 2024

- Engineered interactive systems for mobile and web F2P titles on Android, iOS and Facebook Games.
- Established the onboarding process for new engineers, reducing ramp-up time across distributed teams.
- Expanded data-driven reward engines and real-time asynchronous messaging; integrated monetization and analytics frameworks in high-volume transactional systems.

PeakActivity *Software Engineer → Senior Software Engineer – Unity, Team Lead* Jul 2020 – Dec 2023

Subcontracted through Siono (Jul 2020 – Sep 2022), then contracted directly by PeakActivity and promoted to team lead (Oct 2022).

- Led cross-functional teams delivering AR/VR applications for Meta Quest, Magic Leap, visionOS and WebGL.
- Built an iOS AR app nominated for the Unity Awards 2021, helping secure a strategic partnership with Unity and Magic Leap.
- Developed a Magic Leap 2 AR experience showcased at AWE.
- Architected end-to-end cloud integrations connecting client runtimes to backend microservices via REST APIs.
- Integrated the ArcGIS Maps SDK for real-time geospatial VR; built an iOS LiDAR system that captures and renders point clouds.
- Delivered a WebGL virtual-assistant framework for holographic installations; maintained multi-platform deployment pipelines.

The Capture Worlds *Creator & Lead Developer — Independent Steam release* Mar 2018 – Mar 2020

- Built and self-published an open-world procedural PC game on Steam, achieving 80%+ positive user reviews.
- Implemented procedural generation that automated 80% of content-pipeline tasks.
- Managed post-launch updates and AWS S3 storage; built custom object pooling and low-level memory managers.

Code Bullet *Lead Programmer – Unity* Jan 2017 – Feb 2018

- Turned a prototype into Landless, an open-world survival game shipped on Steam; directed a team of 4.
- Designed a procedural asset-configuration system that automated the asset pipeline, saving over $50K in production costs; contributed design changes that drove first-year sales above $100K.

Independent Development *Software Developer – Unity* Feb 2015 – Dec 2016

- Self-directed Unity work alongside a non-games job: a real-time 3D combat RPG prototype (abilities, progression, NPC AI, object pooling).

Stoneworks Games *3D Artist & Junior Unity Developer (Freelance)* Feb 2013 – Jan 2015

- Built a procedural asset-combination system that scaled 40 assets into 4,800+ unique variations for Blood of Magic (PC, 2015).
- Developed an NPC generation system that automated 80%+ of NPC creation in the final game.

TECHNICAL SKILLS

Languages	C#, TypeScript, JavaScript, SQL, HTML, CSS
Architecture	OOP, SOLID, MVC, Event-Driven, Dependency Injection, Design Patterns, REST APIs
Web & Mobile	React, Next.js, Node.js, Angular, Ionic, Tailwind CSS, Android, iOS
Cloud & Data	AWS S3, Firebase, Supabase, Vercel, PlayFab, SQL Server, MySQL, MongoDB, WhatsApp Business API (webhooks)
Engine & XR	Unity (3D/2D/URP), Addressables, Asset Bundles, WebGL, AR Foundation, Meta Quest, Magic Leap, visionOS
Specialized	Procedural Generation, Behavior Trees, Object Pooling, LiDAR, ArcGIS Maps SDK, Performance Profiling
Tooling & DevOps	Git, GitHub, Bitbucket, Jira, Jenkins, CI/CD, Postman, BugSnag, NUnit
AI-Assisted Dev	GitHub Copilot, Cursor, Claude, ChatGPT, Gemini, prompt engineering

EDUCATION

Universidad Tecnológica de Salamanca *Salamanca, Gto, Mexico*

- Engineering in Software Development and Management (Bachelor's) — completed Apr 2026
- A.S. in IT — Multiplatform Software Development (TSU) — completed Aug 2024

Languages: Spanish (Native) · English (Fluent, professional)
