PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience shipping commercial products across PC, mobile (iOS/Android), WebGL, and XR platforms. Proven track record of improving player retention by 5%+, reducing crash rates by 5%, and eliminating over \$100K in production costs through automation. Expert in scalable architecture, cloud-integrated workflows, and AI-assisted engineering. Consistently delivers full production lifecycles from prototype to live operations.

PROFESSIONAL EXPERIENCE

Alter Learning | *Senior Software Engineer (Contract)* | Nov 2025 - Feb 2026

- Designed reusable architectural frameworks using SOLID principles, MVC, Singleton, and event-driven systems with data-driven ScriptableObjects, reducing onboarding time for new engineers.
- Converted core 2D applications into VR-ready cross-platform builds with modular integration systems.
- Defined development standards and documentation practices, measurably accelerating code maintainability.
- Monitored and optimized core systems for runtime stability, memory management, and rendering performance.

Scopely | *Senior Software Engineer* | Jun 2024 - Aug 2025

- Delivered a new splash screen for WWE Champions that boosted player retention by 5%+, directly impacting daily active user metrics for a high-traffic F2P mobile title.
- Built internal desktop and engine tools for LiveOps and QA teams, improving cross-functional workflow efficiency.
- Reduced crash rates by 5% through targeted optimization and stability fixes, monitored via Unity Profiler, Android Studio, and BugSnag.
- Optimized cloud asset delivery pipelines using advanced asset bundling and remote content distribution systems.
- Integrated third-party analytics hooks and engineered data-driven UI rendering systems.

Amber Studio | *Senior Software Engineer (Contract)* | Jan 2024 - May 2024

- Engineered interactive systems and game mechanics for mobile and web-based F2P titles on Android, iOS, and Facebook Games.
- Established the standard onboarding process for new engineers, reducing ramp-up time and ensuring consistent knowledge transfer across distributed teams.
- Expanded complex, data-driven in-game reward engines and real-time asynchronous messaging networks.
- Integrated monetization hooks and analytics frameworks within secure, high-volume transactional systems.

PeakActivity | *Senior Software Engineer - Development Team Lead* | Oct 2022 - Jan 2024

- Led cross-functional teams delivering AR/VR applications across Quest, Magic Leap, visionOS, and WebGL; created an iOS AR app nominated for the Unity Awards 2021, directly securing a strategic partnership with Unity and Magic Leap.
- Developed an AR app for a premier Magic Leap 2 showcase at AWE 2020, significantly elevating the company's profile as an XR industry leader.
- Integrated ArcGIS Maps SDK for Unity enabling real-time geospatial VR visualization; built an iOS LiDAR scanning system to capture and render point cloud data.
- Architected end-to-end cloud integrations connecting client-side runtimes to backend microservices via REST APIs.

Siono (Contracted to PeakActivity) | *Software Engineer* | Jul 2020 - Sep 2022

- Developed cross-platform AR and high-performance WebGL applications for enterprise clients.
- Built interactive logical simulations and immersive VR training environments.

- Delivered a WebGL-based virtual assistant framework optimized for holographic installation software.
- Maintained and documented multi-platform deployment pipelines, streamlining release cycles.

The Capture Worlds | *Lead Software Developer - Commercial Independent Release* | Mar 2018 - Mar 2020

- Solo-developed and self-published an open-world procedural PC game on Steam, achieving 80%+ positive user reviews.
- Implemented procedural generation algorithms that automated 80% of content pipeline tasks, accelerating production significantly.
- Managed live post-launch updates and AWS S3 cloud storage; built custom object pooling and low-level memory managers to reduce runtime overhead.

Code Bullet | *Software Engineer - Lead Programmer* | Jan 2017 - Feb 2018

- Transformed a prototype into Landless, a full survival open-world game shipped on Steam; directed a team of 4 to deliver scalable assets and gameplay systems.
- Automated the asset pipeline, saving over \$50K in production costs; contributed to design changes driving first-year sales exceeding \$100K.
- Designed key procedural survival mechanics using behavior trees and open-world coordinate spawning systems.

Stoneworks Games | *Technical Artist and Junior Programmer (Freelance)* | Feb 2013 - Jan 2015

- Built a procedural asset combination system that scaled unique asset output from 40 to over 4,800, drastically reducing manual design time.
- Developed an NPC generation system that automated 80%+ of NPC creation used in the final game.
- Modeled, textured, and optimized 3D assets ensuring high performance and visual quality across all target platforms.

EDUCATION

Universidad Tecnologica de Salamanca - Salamanca, Gto, Mexico - Sep 2022 - Apr 2026

- Engineering in Software Development and Management (Bachelor's Level) - Completed Apr 2026 [2024 - 2026]
- A.S. in IT - Multiplatform Software Development (TSU) - Completed Aug 2024 [2022 - 2024]

Languages: Spanish (Native) - English (Fluent - Professional Proficiency)

TECHNICAL SKILLS

Languages and Architecture: C#, JavaScript, TypeScript, SQL, HTML, CSS - OOP, MVC, Singleton, Event-Driven (Observable), SOLID, Design Patterns

Cloud and Databases: AWS S3, Firebase, Supabase, Vercel - SQL Server, MongoDB - REST APIs, WhatsApp Business API (Webhooks)

Web and Mobile Frameworks: Next.js, React, Node.js, Angular, Ionic - Android Studio - WebGL Development

Engine and XR: Unity 3D/2D/URP - ScriptableObjects, Asset Bundles, Addressables - AR Foundation, Quest, Magic Leap, visionOS

Specialized Systems: Procedural Generation - Behavior Trees - Object Pooling - LiDAR Integration - ArcGIS Maps SDK

AI-Assisted Tools: GitHub Copilot, Cursor, Ollama, ChatGPT, Gemini, DeepSeek, OpenCode - Prompt Engineering

Tooling and DevOps: Git, GitHub, Bitbucket - Jira, Trello - CI/CD Pipelines, Jenkins - Unity Profiler, BugSnag, Postman - QA Automation - Microsoft 365

3D Pipeline: Blender, ZBrush, Maya, Substance Painter, Photoshop, Topogun
